

Solutions for Hospitality

Cellular Coverage for Hotels, Resorts, and Restaurants

Connecting Guests, Staff, and Operations

Hotels and resorts depend on reliable connectivity to support guest services, staff communications, operations, and an increasing number of connected technologies across the property. Yet guestrooms, conference spaces, back-of-house areas, stairwells, parking structures, and amenities often experience poor cellular coverage where outdoor signals cannot adequately penetrate and Wi-Fi alone may not provide consistent performance.

Nextivity addresses these challenges with a layered connectivity approach built on CEL-FI QUATRA DAS infrastructure, delivering reliable public cellular for guests and staff, private 5G for critical systems and emerging applications, and scalable IoT connectivity for real-time smart building insight. The result is a single, cost-effective wireless infrastructure that enhances the guest experience, improves staff productivity, supports operations, and provides a foundation for future smart hospitality initiatives.

Supporting Exceptional Guest Experiences

Reliable cellular connectivity has become a visible and measurable part of the guest experience, influencing satisfaction, reviews, and repeat business.

Modern travelers expect seamless mobile coverage throughout a property, from guestrooms and conference spaces to restaurants, bars, gyms, and spas.

Guests expect reliable cellular service for:

- Communicating with family, friends, and colleagues
- Streaming content and accessing mobile apps
- Mobile check-in, digital room keys, and contactless services
- Business communications and video conferencing
- Transportation, payment, and travel-related applications

One Infrastructure Delivers Measurable Results

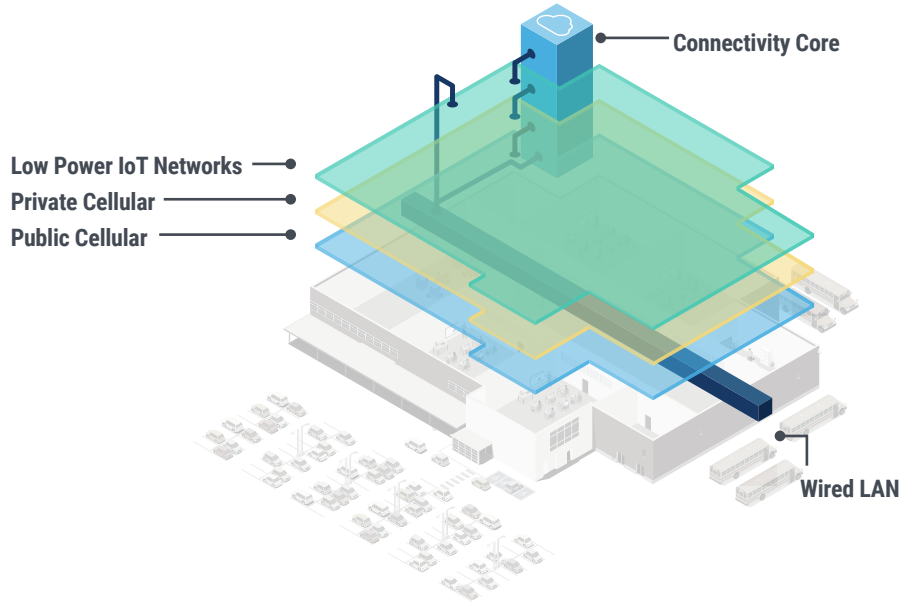

- ▶ Improve guest satisfaction and mobile experiences
- ▶ Enhance staff communications and operations
- ▶ Support mobile-first guest services
- ▶ Extend coverage throughout the property
- ▶ Strengthen guest loyalty and reviews
- ▶ Future-proof infrastructure for evolving technologies

Why Cellular *and* Wi-Fi

- ▶ Reliable coverage while moving throughout a property
- ▶ Better coverage in guestrooms, stairwells, elevators, and back-of-house areas
- ▶ No guest logins or onboarding required
- ▶ Provides an additional communications layer

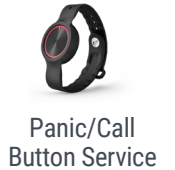

Connectivity Infrastructure: Unified Wireless Communications Platform

Nextivity offers a unique approach to hospitality connectivity, combining public cellular, private 5G, and IoT sensing on a single CEL-FI QUATRA DAS infrastructure. Our solution delivers reliable communications for guests and staff while reducing complexity and cost as Smart Building technology needs evolve. This layered, “design once, support everything” approach provides a future-ready foundation for guest services, staff safety, operational efficiency, and smart building technologies. Applications include panic and call button solutions for housekeeping and lone workers, as well as IoT sensors that, for example, detect water leaks and alert staff before minor issues become costly repairs.

Public cellular connects people.
Private cellular connects systems.
IoT connects insights to action.
